

Make at home: Binoculars

Get set for some wildlife spotting with these easy to make binoculars!

You will need:

2 toilet roll tubes

Tape

Optional: string, pens to decorate

They won't magnify what you can see like real binoculars but they're great for focusing your eyes on a particular animal or area.

Take 2 toilet roll tubes and use tape to stick them together.

If you like, make holes in either side and attach some string so you can hang them around your neck (ask an adult to help). You could also decorate your binoculars with animal prints or camouflage.
